#### **Johns Hopkins Alzheimer's Disease Research Center (Albert)**

To serve as Center Associate Director, Clinical Core Leader, and Education Core Co-Leader. The major goal of Clinical Core B is to recruit and follow a diverse group of research subjects to support research projects associated with the ADRC. Core B will accomplish this overarching goal by working closely with ADRC leadership and with the other Cores and Projects.

#### **Escitalopram for Agitation in Alzheimer Disease**

Agitation is common in Alzheimer's disease (AD) and a major burden to patients and caregivers. We will develop an evidence-based, sequential approach to treating agitation in AD with real world applicability for patients. We will enroll 589 patients with AD and agitation and administer a psychosocial intervention. Patients not showing improvement in agitation will be randomized to escitalopram or placebo to evaluate for efficacy and safety. We will also evaluate pre-specified predictors of response. Finally, we will follow patients showing improvement on the psychosocial intervention to study their outcomes.

## RESEARCH ACTIVITIES

### Research Focus

My research has several related themes centering around epidemiology, clinical epidemiology, and treatment development for dementia, especially Alzheimer's (AD) and its prodromes.

**As of 23 March 2021, my H-index with Google Scholar was 125, with 55,912 citations to my work.**

As investigator in the Cache County Study of Memory, Health, and Aging, and the Cardiovascular Health Cognition Study, I led or contributed to studies on the incidence, prevalence, and risk factors for dementia or MCI. These findings are widely cited internationally and have significantly impacted understanding of the epidemiology of dementia and its prodromes. Publication (d) below, demonstrating universal prevalence of neuropsychiatric symptoms (NPS) in dementia, has been cited over 1200 times and is a basis for accelerated efforts to develop effective therapies targeting NPS (more below):

- a. Tschanz JT, ... **Lyketsos CG**, Breitner, JCS. A population study of Alzheimer disease: Findings from the Cache County Study on Memory Health and Aging. *Care Management Journals* 2005

- d. **Lyketsos CG** et al. Prevalence of neuropsychiatric symptoms in dementia and mild cognitive impairment. *JAMA* 2002; 288 (12):1475-1483

As CoPI/Multiple PI of the Cache County Dementia Progression Study, I led or co-led studies describing the patterns of dementia progression, and associated risk factors, in a unique population-based sample of incident dementia. This work demonstrated great variability in dementia progression after onset, as well as the contribution the care environment, medical co-morbidities, and NPS to accelerated progression. As many of these factors are modifiable this work has greatly contributed to the development of evidence based comprehensive dementia care approaches that can be implemented currently (see below).

In a series of investigations, I studied in depth patterns of occurrence and impact of NPS on dementia or transition from MCI to dementia. In recognition of leadership in this area I was asked by the Alzheimer's Association to lead an international work group on NPS treatment development that continues work as the NPS-Professional Interest Area of ISTAART. This group proposed a specific set of NPS syndromes laying the foundation for accelerated efforts to develop therapies targeting each of these. This approach has gained wide traction with pharmaceutical companies internationally, and with regulatory agencies such as FDA.

In recent years, my work has focused on accelerating treatment development for MCI or dementia due to Alzheimer's. Subthemes have included development of novel imaging and blood biomarkers to facilitate clinical trials, and as PI or CoPI of a series of NIH-funded R01 or U01s, testing novel therapies such as NSAIDs for the prevention of AD, sertraline for depression, citalopram for agitation, deep brain stimulation for mild AD dementia, or comprehensive dementia care (MIND at HOME) to delay the transition from community homes to institutions. In the latter efforts, I developed extensive skills and experiences as the national PI of several multi-center clinical trials solidifying my expertise as an interventional epidemiologist. Most recently I was awarded a \$15m grant by NIA to develop novel, personalized algorithms for the treatment of NPS-agitation in a multicenter clinical trial.
